

Archdex

Independent Software Engineer AI Systems & Developer Tooling

github.com/archdex-art • halfwitpirate@gmail.com • Remote • Worldwide

SUMMARY

Independent engineer building infrastructure-grade AI systems and developer tooling end to end architecture, implementation, security hardening, CI, documentation, and deployment. Ships across Go, Rust, TypeScript, and Python, with a bias for determinism, verifiable results, and security in the open.

SELECTED WORK

AgentMesh Go

Framework-agnostic control plane for AI agents: OpenTelemetry tracing, deterministic replay, and MCP governance over ClickHouse/Postgres/Redis/MinIO. 8/8 milestones complete.

CodeGraph TypeScript / Next.js

Turns a repo into a symbol-level knowledge graph and runs a deterministic 7-agent remediation swarm with verified fixes no LLM keys. Live on Render; 96/96 tests.

SuperSearch Rust / Tauri

Intent-driven runtime for macOS: natural language replayable task graphs, driven through an object-capability security model with an append-only journal and WASM plugin sandbox.

Live API Inspector TypeScript

Privacy-first Chrome DevTools extension: semantic endpoint clustering, performance intelligence, and AI root-cause analysis with local secret redaction.

Browser Memory AI TypeScript

Local-first browser knowledge graph: entity extraction, an embedding pipeline, and hybrid full-text + vector recall behind a plugin SDK.

CodeGraph Local TypeScript

Standalone, offline VS Code extension bringing the symbol graph, health score, and 7-agent swarm in-process via the TypeScript compiler API.

CORE STACK

Go • Rust • TypeScript • Python • Next.js • React • Tauri • OpenTelemetry • Model Context Protocol • ClickHouse • Postgres • Redis • Vector Search • WASM • Docker • CI/CD • Security hardening
